

HARVARD GRADUATE SCHOOL OF EDUCATION

The Collaborative on Academic Careers in Higher Education

August 14, 2015

Dr. Paige Borden
University of Central Florida
PVL Building 215
Orlando, FL 32816-0021

Dear Dr. Borden,

We are pleased to provide the University of Central Florida, as a member of the 2014-15 cohort of the Collaborative on Academic Careers in Higher Education (COACHE), with a comprehensive report on the work satisfaction of your faculty. With an average survey completion time of twenty-two minutes, this report constitutes approximately 198 hours of your faculty's time and, more importantly, their candor. As you read this report, consider the investment your faculty have already made in this project.

The Provost's Report—your summary of key findings—is enclosed. To access digital versions of these materials, please check your email for a link to our secure download service. Included with your download are supplemental materials and resources to help you make the most of your report.

As part of our commitment to providing members with the most value for your membership, our team has taken some time to review your results. Please consider the following thoughts as you review your full report.

Selected Comparison Institutions

- ▶ Auburn University
- ▶ Florida International University
- ▶ Florida State University
- ▶ North Carolina State University
- ▶ University of Houston

Areas of Strength

Your faculty rated two of the COACHE benchmark themes higher than faculty at your selected comparison institutions and at most similar-sized institutions.

- ▶ Tenure policies
- ▶ Tenure clarity

These dimensions should be shared with your faculty (and those you recruit) as the qualities that make UCF a great place for faculty. Keep in mind that while your overall scores appear high, there may be some variance in sub-groups. Your COACHE Dashboard (p. 17) will help you drill down further into the results for a more nuanced understanding.

Areas of Concern

Additionally, your faculty rated eight benchmark themes lower than faculty at your selected comparison institutions and at most similar-sized institutions. These benchmark themes are listed below as

areas of concern and should be explored in greater depth. Use your Provost's Report to understand the particular aspects of these benchmarks that are driving lower scores.

- | | |
|--------------------------------|--------------------------------|
| ▶ Nature of Work: Service | ▶ Departmental leadership |
| ▶ Nature of Work: Teaching | ▶ Departmental collegiality |
| ▶ Personal and family policies | ▶ Departmental quality |
| ▶ Promotion | ▶ Appreciation and recognition |

To help get you started acting upon these results, we have included inside this report a "Your Results in Context" section for each benchmark. Our secure download site also contains many resources to guide discussions with your faculty about improving their satisfaction in these areas.

Notable differences among your faculty

Looking at UCF faculty, we see some variance within groups worth exploring. Differences within groups may necessitate tailored approaches to improving the climate for your faculty. In particular, you should explore these findings:

- ▶ Tenured faculty reported lower scores than pre-tenure faculty on twelve benchmarks with moderate effect size differences on the *Health and retirement benefits*, *Interdisciplinary work*, and *Departmental leadership* benchmarks and a large effect size noted on the *Mentoring* benchmark.
- ▶ Associate professors reported lower scores than their full professor colleagues on eight benchmarks, with a large effect size noted on the *Promotion* benchmark.
- ▶ Female faculty reported lower scores than male faculty on six benchmarks, with a moderate effect size noted on the *Promotion* benchmark.
- ▶ Faculty of color reported lower scores than white faculty on seven benchmarks with moderate effect size differences on the *Facilities and work resources* and *Departmental collegiality* benchmarks.

Immediately following this letter is a display of your divisional/disciplinary results for nineteen of the COACHE benchmarks, excluding units with fewer than five respondents. After reviewing the full report, you may wish to use this snapshot to identify pockets of excellence on your campus. Are there particular divisions which seem to be performing well above your overall campus performance? Have those divisions identified specific practices that can be implemented elsewhere? Finding success stories on your own campus is an excellent way to begin the process of solving problems. Just keep in mind that higher and lower scores can be the result of disciplinary contexts. We find that effective leaders, sensitive to such contexts, choose as their dissemination tool the pedestal, not the pillory.

As you review your results and consider next steps, stay connected to COACHE. Over the next two years, we will check in regularly to schedule conversations about what you are learning and to help connect you with resources to improve the workplace for your faculty. If you and your team have not already participated in the COACHE webinar designed to assist you with the interpretation of your Provost's Report, I encourage you to contact our office now. Please rely on all of the resources included in your Digital Report Portfolio to engage your campus in these COACHE results.

Sincerely,

Kiernan Mathews, Ed.D.
Director & Principal Investigator

R. Todd Benson, Ed.D.
Associate Director, Surveys & Analysis

The Provost's Report
INTRODUCTION

PREFACE

The core strength of an institution of higher education is its faculty. A preponderance of evidence supports the notion that college faculty are affected by their perception of the values and rewards in their workplace, and that supportive environments promote faculty satisfaction, which can lead to a greater commitment to and relationship with their home institution. With this understanding, the Collaborative on Academic Careers in Higher Education (COACHE) at the Harvard Graduate School of Education developed the Tenure-track Faculty Job Satisfaction Survey.

Since 2003, COACHE institutions have used data from this survey to leverage improvements in the workplace for pre-tenure faculty. Meanwhile, COACHE and its research partners have analyzed the data more broadly to understand the themes associated with faculty satisfaction and to contribute to the existing literature on faculty. Perhaps one of the most critical lessons learned in the first few years of COACHE's development is the role that tenured faculty play as catalysts for the success of pre-tenure faculty. Tenured faculty serve as leaders for campus governance and policy decisions, as mentors to pre-tenure faculty, and as the arbiters of campus culture and climate. Simply put, tenured faculty shape nearly every facet of campus life. To understand them better, COACHE expanded its focus in 2010 to include the design and launch of the Tenured Faculty Job Satisfaction Survey.

After a successful pilot study with seven large research universities, the COACHE team merged the two surveys to create a unified instrument (with appropriate branches) attending to the full spectrum of tenure-stream faculty. In 2012-13, COACHE added an optional survey module to assess the work satisfaction of full-time, non-tenure-track faculty.

COACHE surveys faculty about their experiences and views as regards several important areas of their work lives:

- Research, teaching, service
- Resources in support of faculty work
- Benefits, compensation, and work/life
- Interdisciplinary work and collaboration
- Mentoring
- Tenure and promotion practices
- Leadership and governance
- Departmental collegiality, quality, engagement
- Appreciation and recognition

We are pleased to provide this diagnostic and comparative management tool for college and university leaders. Tailored to each participating institution, this COACHE report and supplementary materials pinpoint problem areas, whether within a particular policy, practice, or demographic. This benchmarking report identifies the overall performance of your campus compared to your selected comparison institutions, compares subgroups at your campus to subgroups at other campuses, and describes differences between groups on your campus. Thorough, yet accessible, this report is designed to assist faculty and administrators to confront concerns and showcase achievements.

Membership in the Collaborative, however, does not conclude with delivery of this report. Academic leaders use COACHE results to focus attention, spot successes and weaknesses, and then to take concrete steps to make policies and practices more effective and more prevalent. Our mission to make the academy a more attractive place to work is advanced only when supported by institutional action. To that end, COACHE is your partner and a resource for maximizing the ability of your data to initiate dialogue, recruit talented scholars, and further the work satisfaction of *all* faculty at your institution. For our advice on making the most of your participation, please review the supplementary material provided with this report. Then, contact us with any questions or new ideas that have emerged.

GUIDE TO YOUR REPORT

Introduction

The quality of an academic institution depends heavily on its faculty. As teachers, scholars, participants in shared governance and the purveyors of institutional culture and history, faculty are at the heart of the best work being done in higher education today. Not surprisingly, supporting faculty in all the work they do is a central focus for successful academic leaders.

By enrolling as a member of the Collaborative on Academic Careers in Higher Education, you have already shown a commitment to improving the faculty workplace. In fact, just the act of asking your faculty to participate in the Faculty Job Satisfaction Survey helps communicate concern for and support of your faculty. Today, with the delivery of your institutional report, you take the next step towards improving the academic workplace on your campus.

This report contains the data necessary for you to understand where your institution thrives and where it struggles in the key components of faculty life. Considering faculty satisfaction within your campus as well as comparatively will provide you with a robust sense of where your campus supports faculty well and where there is work to be done.

Given hundreds of survey items disaggregated by race, gender, tenure status and rank for your institution and all others in COACHE, we have used the best of our abilities to synthesize, organize, and prioritize millions of data points in a thorough yet accessible format.

We encourage you to share this report with other senior administrators, faculty leadership, institutional researchers, and other constituents. In fact, your report portfolio includes communication models

and milestones to consider in your dissemination strategy. We also recommend that you participate in one of COACHE's regularly-scheduled "Guided Tour to Your Report" and other webcasts.

Keeping your audiences in mind, we designed your report with components that can be distributed together or individually around campus. Your COACHE portfolio contains:

- the **Provost's Report**, summarizing your results overall and according to key subgroups at your institution relative to the five selected comparison institutions and to the faculty labor market writ large;
- the **COACHE Digital Report Portfolio**, which includes an online reporting tool, tables of mean comparisons and frequency distributions, faculty responses to open-ended questions, and results for any custom items appended to the COACHE instrument.
- **supplementary materials** to assist you in engaging your campus community in making the most of your investment in this research.

This guide introduces you to each of these portfolio pieces and provides you with recommendations for maximizing the utility of your report.

Just as your work with the data has just begun, so has your work with COACHE. Your three-year membership means that we will continue to support your exploration of the data. We sincerely hope that you will take advantage of COACHE-sponsored opportunities to learn from the most promising practices of your colleagues and to share your plans for using COACHE data to improve faculty workplace satisfaction.

The Provost's Report

Your Provost's Report is designed to provide the reader with an "at-a-glance" understanding of the views of your faculty with respect to faculty at your comparison institutions and across the sector. It will also help you to see where subgroups of faculty on your campus differ with respect to each other. Understanding the balancing act that senior administrators perform on a daily basis, COACHE designed this report with the goal of providing your campus with top-level analysis and some indicators of where to dig deeper. In other words, it is the best place to start; just keep in mind that much more is available.

Response rates and selected comparison institutions

In this section, you will find the response rates for your campus, your selected comparison institutions, and the faculty labor market. Disaggregation by tenure status, rank, gender, and race will help you to consider non-response generally and within subgroups of your faculty.

Your results at a glance

This single chart summarizes the benchmark results for your institution relative to your selected comparison institutions and the entire cohort of participating institutions. Each column represents the range of institutional means (*not* the distribution of individual respondents) along that dimension. Within each chart, you can see your institution's mean score on the benchmark (◆), the mean scores of your five selected comparison institutions (●), and the distribution of the responses of the entire cohort as signified by the red, grey, and green boxes.

You should be most concerned with the placement of your marker (◆). A score in the red section of the column indicates that your institution ranked in the bottom 30 percent of all institutions. A mark in the green section indicates your faculty rated a benchmark in the top 30 percent of all institutions. A mark in the grey area indicates a middle-of-the-road result.

This combination of your cohort comparison and rank relative to your selected comparison institutions establishes the threshold COACHE uses to identify *areas of strength* and *areas of concern*. An *area of strength* is identified as any benchmark or survey item where your score is in the top two among your selected comparison institutions *and* in the top 30 percent across all institutions. An *area of concern* is any benchmark or item where your campus falls in the bottom two among the selected comparison institutions *and* in the bottom 30 percent compared to the entire survey cohort. This two-step criterion allows you to differentiate between results that are typical of your institutional type and those that are out of the ordinary.

The COACHE Dashboard

This data display offers a view of your faculty from 10,000 feet. Each benchmark represents the mean score of several items that share a common theme. Thus, the benchmark scores provide a *general* sense of how faculty feel about a particular aspect of their work/life. The benchmarks include:

- Nature of work in research, teaching, service
- Resources in support of faculty work
- Benefits, compensation, and work/life
- Interdisciplinary work and collaboration
- Mentoring
- Tenure and promotion practices
- Leadership and governance
- Departmental collegiality, quality, engagement
- Appreciation and recognition

For each result, your report will use two adjacent triangles (◄►) to compare your faculty's rating to those of your selected comparison institutions (the left ◄) and the cohort (the right ►). Red triangles (◄►) indicate an area of concern relative to the comparison group; green triangles (◄►) are areas of strength; grey triangles (◄►) suggest unexceptional

performance; and empty triangles (<|>) signify insufficient data for reporting comparisons.

With this iconography, your dashboard page shows your results relative to your selected comparison institutions and the cohort overall, by tenure status, rank, gender, and race/ethnicity. For example, a finding for females might read , meaning that, compared to women elsewhere, your female faculty's ratings placed your campus in the top two among your selected comparison institutions and in the bottom 30 percent among all COACHE institutions. Thus, although you are generally doing well against your selected comparators, you *and* your comparators have room for improvement in women's attitudes along this dimension.

On the right side of the page are your intra-institutional comparisons, which highlight the meaningful differences between subgroups on your own campus. Here, effect sizes are indicated as small (text appears in cell), moderate (text appears in cell with yellow highlight), and large (text appears in the cell with orange highlight). Trivial differences remain blank. The name of the group with the *lower* rating appears in the cell to indicate the direction of the difference. Ideally, this section of your report would be blank, suggesting parity across subgroups. (We did not design a typical red/yellow/green signal here because a large difference is not *necessarily* a poor outcome, but depends, instead, on the context of the result.)

Even if your campus performs well compared to other institutions, large differences between subgroups can suggest a problem. For example, it is quite possible for a campus to perform very well overall on a particular benchmark (or individual item) while still having great disparity based on rank, race, or gender. This is especially true when the number of faculty in a particular subgroup is small. The underrepresented group may be less satisfied, but because their numbers are so small, their concerns may get lost in the overall result.

Benchmark dashboards

After reviewing the COACHE Dashboard, you will have a sense of where, generally, your faculty are most satisfied, moderately satisfied, and least satisfied. To understand these benchmarks fully, you must explore the individual items within them. The next pages of your report apply the same organization of data in the COACHE Dashboard to each survey dimension. Using the framework described above, these tables display results for the individual items nested in each benchmark.

For those institutions with prior COACHE data, the tables include comparisons of your new data to your most recent past results. A plus sign (+) indicates improvement since your last survey administration. A minus sign (-) indicates a decline in your score. Change over time is only reported for survey items that have not changed since your prior survey administration. Given the update that occurred to the instrument in 2011-12, many questions do not track perfectly to prior versions of the survey. If the question changed even slightly since the last time it was administered, the data are not reported here. However, please feel free to contact COACHE for help comparing more items in this year's report to prior years' reports.

Other displays of data

Some questions in the COACHE Survey do not fit into a benchmark. This happens when an item does not use a five-point Likert scale or when the nature of the question does not lend itself to analysis by a central tendency (i.e., a mean). In most of these exceptions, a separate display highlights those results.

The **Retention and Negotiation** items are such an example: the COACHE Survey asks faculty about their intent to remain at the institution and details about what, if anything, they would renegotiate in their employment contracts. The Provost's Report includes two pages dedicated to these items.

The **Best and Worst Aspects** pages are another example of important survey items that do not fit a benchmark factor scale. The survey asks faculty to identify, from a list of common characteristics of the academic workplace, the two best and two worst aspects of working at your institution. The most frequently mentioned “best” and “worst” aspects are highlighted.

Your Provost’s Report also includes COACHE’s **Thematic Analysis of Open-ended Questions**. The final open-ended question in the survey asks respondents to identify the one thing they feel their institutions could do to improve the workplace for faculty. COACHE reviews all comments, redacts any identifying information, and codes them thematically. This table summarizes those themes by rank and provides comparative data. Note that responses often touch upon multiple themes, so the total number of comments reported in this thematic summary is likely to exceed the actual number of faculty who responded to this question. The complete responses are available in the Excel version of your COACHE Digital Report Portfolio.

The COACHE Digital Report Portfolio

Your digital report portfolio includes access to an online tool for survey data analysis and, in both Excel and PDF formats, the *Mean Comparisons* and *Frequency Distributions* for all survey results overall, by tenure status, rank, gender, and race/ethnicity. The digital report also includes survey responses to open-ended questions. Use these tools to gain a comprehensive understanding of every result of your survey, to build your own charts or tables, and to tailor your own analyses of the data.

Mean comparisons

The mean comparisons are based on results from all survey respondents at your institution, at the five comparison institutions you selected, and at all other institutions participating in this study. For each survey dimension, the mean is the unweighted

Finally, the **Demographic Characteristics** section includes self-reported background information about respondents’ careers, family status, and other personal qualities. Though most of this information is not used explicitly in our analysis of your results, your online reporting tool (see below) and COACHE staff are available for deeper analysis that deploys these and other survey or institutional variables.

Appendix

The Provost’s Report concludes with suggestions in your appendix for taking the next steps in your COACHE campus strategy. The appendix also includes information about COACHE’s methods and definitions, including a list of the colleges and universities that comprise the “All Comparable Institutions” cohort used in your report. That list also includes, separately, the names of institutions that have participated in past rounds of COACHE surveys, for which comparison data (de-identified) are available for subsequent, follow-up analysis.

arithmetic average of faculty responses on a particular item. Means and standard deviations are provided for your institution overall, for your selected comparison institutions individually and overall, for all comparable institutions overall, and—where population size allows—for groups by tenure status, rank, gender, race/ethnicity (i.e., white faculty or faculty of color), and against prior survey results (if your institution has previously participated in a COACHE survey).^{*} Note that your Digital Report Portfolio also contains these data in Excel format.

^{*} During prior administrations of the COACHE Survey, means were weighted based on race and gender. Although means are no longer weighted, your prior data remain weighted to maintain consistency with your records.

That file provides additional data hidden in the PDF version, as well as the ability to filter and sort the results.

Frequency distributions

As with the mean comparisons, these frequency distribution tables are based on results from all survey respondents at your institution and at all other institutions participating in this study. Provided here are the unweighted counts and percentages of faculty responses on each survey dimension. We provide comparisons overall and between the same sub-groups identified in the mean comparisons (i.e., by tenure status, rank, gender, race/ethnicity, and over time).

A note on interpreting means and frequencies

Relative frequencies of responses for each item can provide crucial information not given by the mean score alone. While a group's mean score gives valuable information about the group's central tendency, the frequency can tell you the extent to which the group is polarized in their responses. For example, consider two hypothetical cases:

Case #1: Half of a group of pre-tenure faculty chose "Very dissatisfied" (1) on a 5-point scale, and half chose "Very satisfied" (5);

Case #2: Every respondent in the group chose "Neither satisfied nor dissatisfied" (3).

In both cases, the mean score is 3.0; however, whereas in the second case the mean reflects individuals' attitudes perfectly, in the first case, the mean value ("Neither satisfied nor dissatisfied") does not actually reflect the attitude of *anyone* in the group. Rather, these respondents seem to be made up of two sub-groups with very different attitudes. It is important to take into account the polarization of scores when considering major policy changes in order to accurately anticipate how faculty members will be affected.

Open-ended responses

This portion of your report lists the comments written by your faculty in response to open-ended questions, including the final survey item, which states, "Please use the space below to tell us the number one thing that you, personally, feel your institution could do to improve the workplace." These results, coded by themes and ranks, are also available in Excel format.

Results of custom questions (if applicable)

For institutions that appended additional, custom questions to the COACHE survey, the results are displayed here in cross-tabulations and/or open-ended narrative.

Online reporting tool

COACHE is currently in the development of a new online reporting tool. Members in the 2015 Cohort will have access to this tool in 2016.

Supplementary material

Your digital repository also includes supporting material to help you contextualize your results and to consider policies and practices in response.

- **The COACHE Survey Instrument**
- **Your Results in Context** compiles in one document the explanatory pages that accompany the Benchmark Dashboards in your Provost's Report, but includes also a list of seminal readings.
- A review of potential **Communication Models and Milestones** may help you design a dissemination and engagement strategy around COACHE at your institution.
- A folder of **Suggested Readings** includes an array of COACHE's prior reports, research, and other materials to support your efforts to make the most of your investment in this project.

The Provost's Report **RESULTS**

University of Central Florida

		overall	tenured	pre- tenure	full	assoc	men	women	white	faculty of color
University of Central Florida	<i>population</i>	768	622	146	261	363	519	249	531	237
	<i>responders</i>	363	278	85	123	160	225	138	257	106

Selected peers	<i>population</i>	4936	3884	1052	2221	1719	3397	1539	3614	1322
	<i>responders</i>	2423	1890	533	1109	808	1577	846	1871	552
	<i>response rate</i>	49%	49%	51%	50%	47%	46%	55%	52%	42%
All	<i>population</i>	62403	46927	15476	25262	21911	39838	22565	47033	14743
	<i>responders</i>	30405	22644	7761	11946	10812	17955	12450	24118	6249
	<i>response rate</i>	49%	48%	50%	47%	49%	45%	55%	51%	42%

Note: Due to some missing gender and race/ethnicity data, the numbers of males and females, and of white faculty and faculty of color, may not sum to the total populations.

SELECTED COMPARISON INSTITUTIONS

You selected five institutions as peers against whom to assess your COACHE Survey results. The results at these institutions are included throughout this report in the aggregate or, when cited individually, in random order. Your peer institutions are:

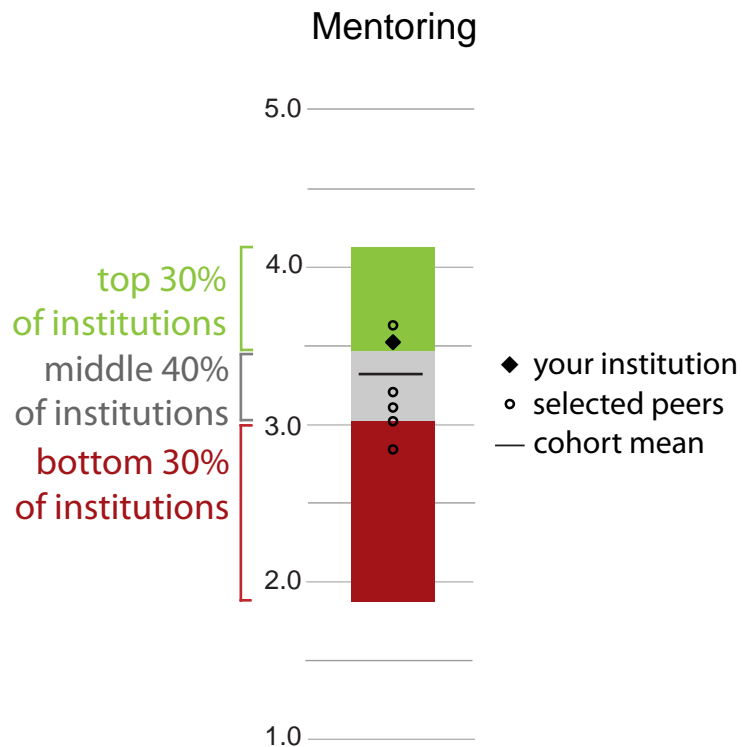

- ♦ Auburn University
- ♦ Florida International University
- ♦ Florida State University
- ♦ North Carolina State University
- ♦ University of Houston

CHANGE OVER TIME

If your institution participated in a previous administration of the COACHE Faculty Job Satisfaction Survey, this report will show change over time for any questions that have remained unchanged. For campuses with multiple years of comparative data, users may toggle between cohort years by using the Criteria tab of the Excel report.

COACHE

Results at a Glance

This chart summarizes over a half million data points in benchmark results for your institution relative to peers and the full cohort of COACHE's participating institutions.

Each column represents the range of institutional means (not the distribution of individual respondents) along that dimension. Within each chart, you can see your institution's mean score on the benchmark (◆), the mean scores of your five peers (○), and the distribution of the responses of the entire cohort of institutions as signified by the red, grey, and green boxes.

You should be most concerned with the placement of your marker (◆). A score in the red section of the column indicates that your institution ranked in the bottom 30 percent of all institutions. A mark in the green section indicates your faculty rated a benchmark in the top 30 percent of all institutions. A mark in the grey area indicates a "middle-of-the-road" result.

University of Central Florida

COACHE Dashboard Guide

This is the overall score (between 1 and 5) for all faculty respondents at your institution.

These columns describe how your faculty's responses compare to similar faculty at other COACHE institutions: tenured vs. tenured, men vs. men, faculty of color vs. faculty of color, etc.

These columns compare groups on your campus: pre-tenure/tenured, associate/full, women/men, white/faculty of color.

	mean	overall	tenured	pre-ten	full	assoc	men	women	white	foc	tenure	rank	gender	race	2008
Health and retirement benefits	3.43	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	pre-ten	full	women		
Interdisciplinary work	3.00	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	pre-ten	assoc	women	white	
Collaboration	3.46	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	tenured		women	white	
Mentoring	3.18	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	◀▶	tenured	assoc		foc	
Tenure policies	3.64	◀▶	N/A	◀▶	N/A	N/A	◀▶	◀▶	◀▶	N<5	N/A	N/A			+
Tenure clarity	3.33	◀▶	N/A	◀▶	N/A	N/A	◀▶	◀▶	◀▶	N<5	N/A	N/A	men		

What do these triangles mean?

These symbols represent results that fit COACHE's criteria (adjustable in Excel) for "areas of strength" (in green) and "areas of concern" (in red).

Your ranking among peers:

1st or 2nd ▶

3rd or 4th ◀

5th or 6th ◀

insufficient data for reporting ◀

Your percentile among all members:

▶ Top 30%

◀ Middle 40%

◀ Bottom 30%

This result, for example, shows that your female faculty are **less satisfied** than are women at your peers (◀), but **more satisfied** than are women at 70% of other institutions (▶). Although the women at your institution are "less satisfied" than women at peers, they still fare better than most.

And these results?

Here, the faculty subgroup with the *lower* rating appears. Shading conveys the *magnitude* of subgroup differences: **small** effects appear as text only, **moderate** effects are shaded yellow, and **large** effects are shaded orange. Trivial differences remain blank. Change over time appears as +/-.

Regardless of your results compared to peers and others (on the left), you should direct your concern to subgroups who consistently appear here in yellow or orange shaded cells.

Your Findings in Context

Nature of Work: Research

Guiding Principles

Faculty satisfaction with research is a function not just of the time faculty members have to commit to research, but importantly, of the clarity and consistency of institutional expectations for research productivity and the resources colleges and universities provide faculty to meet them. When faculty are criticized for falling short of others' expectations for research, consider the demands, obstacles, mixed signals, and lack of meaningful support that may be undermining their ability to do their best work.

The COACHE instrument invites faculty to assess the environmental qualities conducive to research productivity. The questions are designed to be agnostic on institutional type (e.g., research university, liberal arts college) and research area (in the disciplines, creative work, the scholarship of teaching and learning). It is in the analysis where participating colleges and universities can determine whether faculty feel they are being supported in fulfilling the expectations of them.

Hallmarks of Successful Models

If your institution is serious about supporting faculty research and creativity, then be prepared to commit to the essential elements of success:

Leadership on research support comes from the top. C-level leadership in stressing the importance of excellence in research is critical substantively and symbolically. This means that resources directed at supporting faculty work—across the creative lifecycle—are crucial, as is the messaging that goes along with the financial support.

Formal offices and programs energetically support faculty research. Visibly dedicating resources to support faculty work clearly demonstrates how important faculty members are to institutional success. Our studies identified the following areas of focus for full-time college staff:

Grant support. Many universities offer pre-award support to faculty preparing proposals for outside

funding. What is less common, but equally important, is post-award support.

Internal grants. Faculty are grateful for internal funding, even in small amounts. Well-designed programs can foster interdivisional collaboration, extramural mentoring, and other innovations.

Research institutes. Such institutes may be a source of internal grant support, but even more, they are places where faculty find collaborators and inspiration.

Colloquia, workshops, and seminars. All faculty, and especially pre-tenure faculty, appreciate opportunities to present their research at colloquia on campus, receive feedback, and fine-tune their work prior to presenting at a national conference. Workshops and seminars for writing grants, running a lab, getting published, mentoring undergraduates and graduates, getting tenure and “getting to full” are all programs that support fulfilling collaboration and engagement.

Nature of Work: Teaching

Guiding Principles

Among the core areas of faculty work explored by the COACHE survey, teaching—and the supports institutions provide faculty to teach well—is bound by significant constraints, but also by great opportunities. The challenge for every faculty member is to strike a balance between institutional expectations for teaching and the time and ability available to invest in it.

Dissatisfaction can occur when expectations for teaching are unreasonable or contrary to what faculty were promised at the point of hire, when institutional support is lacking, or when the distribution of work is inequitable. Time is the common denominator: if expectations for teaching outstrips the time available to meet them, morale and productivity can suffer.

When considering COACHE results on this benchmark, keep in mind that our instrument measures not teaching load, but faculty *satisfaction* with teaching load. While reducing teaching load is often “off the table” as a short-term fix, increasing faculty *satisfaction* with teaching load can be accomplished through workshops and seminars

about improving teaching, mentoring students, using instructional technologies, and experimenting with new pedagogical techniques. These opportunities may be housed in centers of teaching and learning (or of “faculty success” or “faculty excellence”), where other resources and advice are dispensed by seasoned experts. The implementation of *and communication about* these supports can increase faculty satisfaction with the nature of teaching.

Hallmarks of Successful Models

Most COACHE institutions with exemplary results on this benchmark had a number of qualities in common. They make expectations for teaching clear from the point of hire. They recruit faculty with a demonstrated devotion to teaching. They ensure that faculty members have a say in which courses they teach and in their content. They offer grants for pedagogical development and innovation, usually through a center for teaching. They also recognize excellence in the classroom through prestigious and substantive awards (e.g., for exemplary teaching informed by creative scholarship, or for outstanding teaching in the humanities) given in public (e.g., at mid-court during a basketball game).

Nature of Work: Service

Guiding Principles

Among the top three responsibilities of the tenure-stream faculty—but almost always the third—service is infused in the ethos of shared governance and the DNA of faculty life. In COACHE focus groups, faculty included in their definition of their most “vital” colleagues an engagement in service to the discipline and university. Yet, tenured faculty expressed their dissatisfaction with their service work: too many committees doing unfulfilling work, too many reports sitting unread on administrators’ shelves, and too many good soldiers picking up the slack of faculty colleagues who, whether by influence or incompetence, seem always to evade service commitments. Meanwhile, college and universities are often encouraged as a best practice to “protect” pre-tenure faculty from too many time commitments outside of the teaching and research

that will make their tenure case. The aggregate result is a gulf between institutional expectations for service and the recognition it receives in evaluations of faculty.

The COACHE survey instrument invites faculty to explore these tensions with questions about the quantity, quality, and equitable distribution of their service work broadly defined, as well as their institutions’ efforts to help faculty be service leaders and sustain their other commitments as faculty. In follow-up interviews with faculty and institutional leaders, a common refrain emerged: faculty are eager to participate not in more service, but in more *meaningful* service, and we must do better to engage and to reward those contributions.

Hallmarks of Successful Models

Colleges and universities with faculty satisfied with service consistently cited institutional mission and culture in explaining their results. Among these exemplars were land-grant universities committed to fostering a service-oriented culture; religiously-affiliated colleges with an explicit service mission; comprehensive colleges with strong ties with the local community; and former normal schools whose minority-serving mission is inextricable from its faculty’s ethic of care. So, institutions struggling with service might do well to explore, engage, and elaborate their mission and historical circumstances—above and beyond the usual website boilerplate—as the foundation of an ethos of service.

College leaders cited other commitments as the basis for ensuring faculty satisfaction with service. Most communicate expectations regarding service through a number of avenues including handbooks, guidelines for mentoring, workshops, orientations, and reviews. It is also common practice to provide course release time for taking on leadership roles and to keep the service commitments of tenure-track faculty few (but not zero), particularly at the college and university level, and to make certain what commitments are required are meaningful.

For practical-minded inspiration from COACHE members with high ratings in the Nature of Work, read our *Benchmark Best Practices* white papers.

Your Findings in Context

Facilities & Work Resources, Personal & Family Policies, and Health & Retirement Benefits

Guiding Principles

Facilities and support. COACHE found a number of facets of the physical workplace for faculty to be especially important to faculty satisfaction, including office, lab, research or studio space, equipment, and classrooms. In addition, many faculty need support for technology, administrative work, and improvements to teaching.

Personal and family policies. The COACHE survey measures faculty beliefs about the effectiveness of various policies—many of them related to work-family balance and support for families. This is especially important because more than two-thirds of COACHE respondents are married; three-fifths, half, and one-third of assistant, associate, and full professors, respectively, have children under the age of 18. In addition, more than one in 10 professors are providing care for an elderly, disabled, or ill family member.

Health and retirement benefits. Health benefits, once a given, have been steadily eroding as the costs of insurance skyrocket, and many faculty put their retirements on hold in the wake of the recent economic recession. To encourage timely retirements, phased programs have become more prevalent. Some allow individuals to enjoy institutional affiliation, intellectual engagement, and contact with students and colleagues, while the institutions realize salary savings and more reliable staffing projections.

Hallmarks of Successful Models

Analysis of our survey identified partner institutions whose faculty rated these themes exceptionally well. Here's what we learned from them:

When it comes to facilities, *new is nice but equity is best*. Faculty understand that not everyone can have a brand new office or lab because campuses must invest in different areas over time, but everyone should enjoy

equity in the distribution of resources and space within a department.

Hire personnel to staff work-life services. This is important not only to get the job done but also for symbolic reasons. Putting physical resources behind your words signifies meaning beyond the rhetoric. It is unlikely that universities will need fewer personnel in the future to attend to these matters.

Have written policies. Platitudes that “This is a family-friendly place” or “There’s plenty of work-life balance here” are no longer enough. In addition to assuring pre-tenure faculty that the institution is doing more than just paying lip-service to work-life balance, written policies provide clarity, consistency, and transparency which leads to greater fairness and equity. Written policies concerning dual-career hiring; early promotion and tenure; parental leave; modified duties; part-time tenure options; and stop-the-tenure-clock provision are also indicators of how family-friendly a campus actually is.

Ensure that written policies are communicated to everyone—pre-tenure and tenured faculty members, chairs, heads, and deans. COACHE research indicates that written policies are particularly important to women and under-represented minorities. Make certain the policies are easily accessible online, and provide personnel to assist faculty in choosing the right healthcare option.

Provide additional accommodations: Childcare, eldercare, lactation rooms, flexibility, and opportunities for social occasions in which kids can be included are all relevant practices that help ensure a viable workplace for the future. Communicating their availability is critical.

Offer phased retirement for faculty to ease into retirement gradually. At the same time, institutions have the flexibility to fill the void left by retiring faculty more easily. Retiring faculty can continue their contributions to the institution by developing the teachers, scholars, and leaders who follow them.

Your Findings in Context

Interdisciplinary Work and Collaboration

Guiding Principles

Interdisciplinary Work. First, universities (and also many liberal arts colleges) have seen widespread growth in research collaboration within and between institutions and with off-campus partners. Although not exclusively the province of the sciences, interdisciplinary research has become the predominant model there. Second, public and private funding for interdisciplinary research has increased. Third, there is a great deal of interest and intrinsic motivation for researchers to cross-fertilize; this type of work attracts many graduate students and early-career faculty. However, because the academy has not yet fully embraced interdisciplinary work, unchanged policies, structures and cultures are institutional disincentives, as they are still best-suited to narrower work within disciplines. This includes publication vehicles, multiple authors, peer review, and reward structures (for promotion and tenure; merit pay; incentives), to name a few.

Collaboration. Despite a popular perception of faculty as soloists, most faculty work requires collaboration whether with students, peers, administrators, or other colleagues inside and outside of the institution, in the classroom or the lab, and with the broader community through service or outreach programs. Although many faculty members value the work they do independently, they also enjoy collaborative projects within and across their disciplines. In addition, many early career faculty members report an expectation for collaboration, having come to enjoy and expect such intellectual commerce during graduate school.

Hallmarks of Successful Models

Leading institutions on these benchmarks openly consider among faculty and administrative leaders the salience and importance of interdisciplinarity to their campuses, including the variety of forms such work can take. These may include:

- *cross-fertilization*, when individuals make cognitive connections among disciplines;
- *team-collaboration*, when several individuals spanning different fields work together;
- *field creation*, when existing research domains are bridged to form new disciplines or sub-disciplines at their intersection; and
- *problem orientation*, when researchers from multiple disciplines work together to solve a ‘real world’ problem.

If interdisciplinary work is important on your campus, discuss and potentially remove the barriers to its practice. The common obstacles to interdisciplinary work extend beyond the disciplinary criteria for promotion and tenure to include also discipline-based budgets and environmental limitations such as space and facilities.

Likewise, discuss the importance of teaching and research collaborations on your campus and the factors that enhance or inhibit it; then determine ways to remove the barriers.

Mentoring

Guiding Principles

Mentoring has always been important in the academic workplace. Only in recent years, however, has the practice evolved more widely from incidental to intentional as academic leaders have come to appreciate that mentorship is too valuable to be left to chance.

Many pre-tenure faculty members feel mentoring is essential to their success, but such support is also instrumental for associate professors on their path to promotion in rank. While some institutions rely on the mentor-protégé approach (a senior faculty member formally paired with a junior faculty member), new models encourage mutual mentoring (where faculty members of all ages and career stages reap benefits), team mentoring (a small group approach), and strategic collaborations (in which faculty members build networks beyond their departments and colleges).

Hallmarks of Successful Models

COACHE partners who are high performers on the mentoring benchmark follow some or all of the following guidelines:

Ensure mentoring for assistant and associate professors.

Promote the mutual benefits for mentee and mentor alike: mentees learn the ropes, collect champions and confidants, and enjoy a greater sense of “fit” within their departments. Mentors feel a greater sense of purpose, even vitality, through these relationships.

Mentoring should meet individuals’ needs, so make no “silver bullet” assumptions about what type of mentoring faculty will want (or even if they will want it at all). Instead, provide multiple paths to mentors on faculty’s own terms.

Transparency is important, especially to women and faculty of color. Therefore, written, department-sensitive guidelines help both mentors and mentees.

For underrepresented faculty groups, finding a mentor with a similar background can be vital to success, yet difficult to find in some disciplines. Support mentoring networks beyond the department and division by reaching out to other institutions (e.g., through a consortium or system).

If possible, reward mentors through stipends, course releases, or other avenues of recognition (examples are available in *Benchmark Best Practices: Appreciation & Recognition*).

Evaluate the quality of mentoring. Both mentors and mentees should be part of the evaluative process. COACHE results can be used to frame the conversation.

For practical-minded inspiration from COACHE members with high ratings in Interdisciplinary Work, Collaboration, and Mentoring, read our *Benchmark Best Practices* white papers.

Tenure & Promotion

Guiding Principles

Tenure. Administrators and faculty alike acknowledge that, at most institutions, the bar to achieve tenure has risen over time. While it is impossible to eliminate anxiety from the minds of all pre-tenure faculty members, or the pressures exerted on their lives en route to tenure, academic leaders can improve the clarity of tenure policies and expectations, and the satisfaction of their faculty, without sacrificing rigor. After so much has been invested to recruit and to hire them, pre-tenure faculty are owed consistent messages about what is required for tenure and credible assurances of fairness and equity, that is, that tenure decisions are based on performance, not influenced by demographics, relationships, or departmental politics.

Promotion. While the academy has recently improved many policies for assistant professors, it has done far less for associate professors. Fortunately, new practices—some truly novel, others novel only to this rank—have emerged from COACHE’s research on tenured faculty. These include modified duties such as reduced teaching load; sabbatical planning and other workshops; workload shifts (i.e., more teaching or more research); improved communication about timing for promotion and a nudge to stand for full; small grants to support mid-career faculty (e.g., matching funds, travel support); a trigger mechanism, such as a ninth year review; and broader, more inclusive criteria.

Hallmarks of Successful Models

We have learned from leading institutions on these benchmarks what practices promote faculty satisfaction. Some findings:

Be direct with faculty during the interview stage about tenure and promotion expectations, then reinforce relative weights and priorities in a memorandum of understanding, then discuss them again in orientation sessions. These are formative opportunities.

If collegiality, outreach, and service count in the tenure process, provide definitions, say how they count, and state how they will be measured.

Provide written information about where to find everything they need to feel comfortable with the tenure process and with their campus. Use intuitively-organized websites with links to relevant policies and people.

Conduct year-long faculty orientations and workshops to support effective teaching and research throughout their years as assistant and associate professors.

Host Q&A sessions or provide other venues where pre-tenure faculty can safely ask difficult questions.

Teach departments chairs to deliver plenty of feedback along the way—annually, and then more thoroughly in a third- or fourth-year review. Written summaries of such conversations are particularly important to women and underrepresented minorities.

Provide sample dossiers to pre-tenure faculty and sample feedback letters to those responsible for writing them.

Ensure open doors for early-career faculty to chairs and senior faculty members in the department. The most clear and satisfied pre-tenure faculty have such access for questions about tenure, for feedback, for opportunities to collaborate, and for collegialship.

Be cognizant of the workload placed on associate professors. They often find themselves buried suddenly with more service, mentoring, and student advising, as well as more leadership and administrative duties that may get in the way of their trajectory to promotion.

Provide mentors. COACHE data confirm that just because a faculty member earns tenure does not mean that s/he no longer needs or wants a mentor.

For practical-minded inspiration from COACHE members with high ratings in Tenure and Promotion, read our *Benchmark Best Practices* white papers.

Your Findings in Context

Leadership: Senior, Divisional, Departmental

Guiding Principles

Academic leaders—especially the provost, dean, and department chair—play critical roles in shaping the satisfaction or dissatisfaction of faculty members. COACHE research has found that tenured faculty desire from the administration a clearly-articulated institutional mission and vision that do not change in ways that adversely affect faculty work (e.g., increased focus on research over teaching or vice versa; raised expectations for generating funding from outside grants). Faculty also wish for clear and consistent expectations for the mix of research, teaching, and service or outreach; support for research (pre- and post-award) and teaching; and a sense that their work is valued.

Deans and department chairs (or heads) can improve faculty morale through honest communication, and particularly by involving faculty in meaningful decisions that affect them. Deans and chairs are also responsible for ensuring opportunities for faculty input and supporting faculty in adapting to any changes to mission and institutional priorities. Equity and fairness in faculty evaluation are also important factors when assessing department head or chair leadership.

Hallmarks of Successful Models

COACHE researchers interviewed leaders from member institutions whose faculty rated items in this theme exceptionally well compared to faculty at other participating campuses. We learned that high-performing institutions do some or all of the following:

Even if the Leadership: Senior marks are low, share them with faculty. Embrace reality, promise change, and be grateful that you have brought to light your faculty's concerns before a vote of no confidence was called.

Ensure that resources are allocated effectively to support changes in faculty work.

Be careful not to let faculty get caught unaware, unsuspecting, or unprepared for shifts in priorities. For example, guidelines for tenure and promotion should not be changed midstream; commitments (e.g., in a memorandum of understanding) should be honored.

Allow senior faculty members grace periods to adjust to new expectations.

Be transparent: it is almost impossible to over-communicate with faculty about changes to mission, institutional priorities, and resource allocation.

Consistent messaging is pivotal to strong leadership: work diligently to ensure that senior, divisional, and departmental leaders are hearing and communicating the same message about institutional priorities.

Priorities must be communicated via multiple channels, media, and venues. A blanket email or a website update does not adequately ensure broad communication of institutional priorities. Develop a communication plan that considers how the faculty everywhere—even the hard-to-reach—get information.

Provide consistent, well-designed management training and educational sessions for your institutional *and* departmental leaders. Offer department chairs more than just a one-day tutorial on the job—develop their leadership competencies. When their term as chair concludes, they will return to the faculty as leaders, not merely managers.

Provide chairs with a “Chair Handbook” and a web portal with “one stop shopping” on mentoring strategy, career mapping tools, and access to advice from peers.

Create opportunities for chairs to convene—perhaps without a dean or provost present—to discuss best practices, innovations, and shared struggles. Then, invite them to share their take-aways with the deans’ council or other senior administrators.

For practical-minded inspiration from COACHE members with high ratings in leadership, read our *Benchmark Best Practices* white papers.

Your Findings in Context

Department Engagement, Quality, and Collegiality

Guiding Principles

Faculty are employed by institutions, but they spend most of their time in departments, where culture has perhaps the greatest influence on faculty satisfaction and morale. We have highlighted three broad areas in which faculty judge the departments in which they work: engagement, quality, and collegiality.

Engagement. It is increasingly common to talk about student engagement, but less so faculty engagement. Yet, it is difficult to imagine an engaged student population without an engaged faculty. COACHE and the Faculty Survey of Student Engagement (FSSE) complement one another in that FSSE considers the faculty-student connection, while COACHE measures faculty engagement with one another—by their professional interactions and their departmental discussions about undergraduate and graduate learning, pedagogy, the use of technology, and research methodologies.

Quality. Departmental quality is a function of the intellectual vitality of faculty, the scholarship that is produced, the effectiveness of teaching, how well the department recruits and retains excellent faculty, and whether and how poor faculty performance is handled.

Collegiality. While many factors comprise faculty members' opinions about departmental collegiality, COACHE has discovered that faculty are especially cognizant of their sense of “fit” among their colleagues, their personal interactions with colleagues, whether their colleagues “pitch in” when needed, and colleague support for work/life balance. There is no substitute for a collegial department when it comes to faculty satisfaction, and campus leaders—both faculty and administrators—can create opportunities for more and better informal engagement.

Hallmarks of Successful Models

As arbiters of departmental culture, chairs especially are well-served to pay attention to departmental collegiality.

They should keep their doors open so faculty can stop in and chat about departmental issues. Likewise, chairs should drop in to offer help, perhaps to intervene.

Be especially conscious that those who are in the minority—whether by gender, race/ethnicity, age, subfield, political views or another factor—are not marginalized in the department; what you might think of as respecting autonomy might be perceived by another as isolation.

Create forums for faculty to play together: schedule some social activities and ensure everyone knows about important milestones in each other's lives. Celebrate! All institutions in our related *Benchmark Best Practices* report foster departmental engagement, quality, and collegiality by hosting social gatherings once or twice a month.

Create forums for faculty to work together: convene to discuss research, methodology, interdisciplinary ideas, pedagogy, and technology.

Provide chair training for handling performance feedback for tenure-track faculty members (e.g., annual reviews, mid-probationary period reviews), tenured faculty members (e.g., post-tenure review, annual or merit review, informal feedback); and non-tenure-track faculty members.

Discuss the vitality of the department by using COACHE and other analytical data to keep these matters from becoming overly-personalized.

Be an advocate for faculty participation in activities in the campuses' center for teaching and learning.

Use department meeting agendas not as a list of chores, but as opportunities for generative thinking. Enlist colleagues to discuss new teaching and research methods or to present case studies to problem-solve. Using this structured time to initiate departmental engagement may encourage continued engagement beyond the meetings. As often as possible, ask department colleagues to take ownership of the meeting by co-presenting.

For practical-minded inspiration from COACHE members with high ratings in department-focused themes, read our **Benchmark Best Practices** white papers.

Your Findings in Context

Appreciation & Recognition

Guiding Principles

Faculty, at all ranks, are just like other employees when it comes to wanting to be appreciated by colleagues and recognized for doing good work. Focus group research conducted by COACHE showed that while many tenured faculty members feel valued by undergraduate and graduate students, with whom research relationships were especially gratifying, they do not receive much recognition from other faculty and upper-level administrators. The degree to which appreciation and recognition themes appeared in our 2010 study of tenured faculty far surpassed their appearance in our pre-tenure faculty research.

In our recent study, tenured faculty (especially at smaller institutions) felt that extramural service that increases the reputation of their colleges, while expected of them, is not recognized and goes unrewarded. Being engaged in the local community or on the board of a nationally-recognized association yields little recognition from senior colleagues or others at their home institutions. This gap between expectations and appreciation discouraged many faculty from external service that increased the reputation of the institution.

Hallmarks of Successful Models

Institutions with high marks for appreciating faculty typically understand the following:

The greatest obstacle is simply not knowing what faculty have done that warrants recognition. What mechanisms are in place to ensure that faculty contributions are being shared with deans, provosts, and with their colleagues? Cultivate a culture of recognition by creating ways for students, faculty, and campus leaders to aggregate and to highlight the accomplishments of your faculty. For example, a physical and a virtual drop box allow others to comment on their good work.

The chief academic officer should get to know the faculty in a variety of forums, including brownbag lunches, speakers' series, workshops, and seminars that

engage faculty members in appealing topics and current issues.

Likewise, deans and chairs should make opportunities to showcase faculty work, share kind words, and offer a "pat on the back" from time to time.

Take note of what faculty are doing and celebrate that work in each school or college at some point every year; such occasions do not have to be costly to be meaningful. We know of two universities where the Provost surprises faculty with a "prize patrol" offering an award or other recognition in what would have been a run-of-the-mill department meeting or class.

Provide department chairs with guidelines to form a nominating committee of two faculty (rotating out annually) responsible for putting forward their colleagues' names for internal and external awards and honors. These might include recognition from a disciplinary association, institutional teaching awards, or prizes from higher ed associations. Such activities foster awareness of and appreciation for *all* department colleagues' work.

For practical-minded inspiration from COACHE members with high ratings in Appreciation and Recognition, read our [Benchmark Best Practices white papers](#).

Assuming you achieve tenure, how long do you plan to remain at this institution? (*Pre-tenure Faculty Only*)

How long do you plan to remain at this institution? (*Tenured Faculty Only*)

How long do you plan to remain at this institution? (*all faculty at your institution merged*)

University of Central Florida

Faculty were asked to identify the two (and only two) **best aspects** of working at your institution. The top four responses for your institution are shown in red and disaggregated by tenure status, gender, and race. The columns labeled *Peer* show the total number of times an item appeared as a top four item amongst any of your five peer institutions. The *All* column reflects the number of times an item appeared in the top four at any of the institutions in the current cohort. When a best aspect at your institution is also shown as a best aspect for your peers and/or the cohort, the issue may be seen as common in the faculty labor market. Best aspects that are unique to your campus are market differentiators for your institution which can be highlighted in recruitment and retention efforts.

University of Central Florida

Faculty were asked to identify the two (and only two) **worst aspects** of working at your institution. The top four responses for your institution are shown in red and disaggregated by tenure status, gender, and race. The columns labeled *Peer* show the total number of times an item appeared as a top four item at any of your five peer institutions. The *All* column shows the number of times an item appeared in the top four at any of the institutions in the current cohort. When a worst aspect at your institution is also shown as a worst aspect by your peers and/or the cohort, the issue may be seen as common in the faculty labor market. More attention should be paid to the worst aspects that are unique to your institution. These distinctions cast the institution in a negative light.

	Overall			Tenured			Pre-tenure			Men			Women			White			Faculty of Color

University of Central Florida

The final question in the COACHE Survey asks faculty to describe the one thing your institution can do to improve the workplace for faculty. COACHE analysts assigned all responses to one or more common themes. The Excel version of this report (found in the Report Portfolio) includes the full comments and more detailed coding.

What is the number one thing your institution can do to improve the workplace for faculty?

The Provost's Report **APPENDIX**

YOUR RESULTS ARE IN YOUR HANDS... NOW WHAT?

YOUR FIRST STEPS

By Kiernan Mathews, Director

This COACHE Provost's Report is the culmination of our work since 2003 with faculty focus groups, two pilot studies, and ongoing dialog with institutional researchers and chief academic officers at our member institutions.

With so many perspectives on report design, we aim to provide the information you and your campus stakeholders need to translate these COACHE results into substantive, constructive actions.

At first glance, the report can be daunting. How does one begin to turn so much data into ideas to improve your institution? To paraphrase Carl Sandburg, this report is like an onion: you peel it off one layer at a time, and sometimes you weep.

The **Provost's Report**, like the skin of the onion, gives you a glimpse of what lies within, but is the beginning, not the end. It is colored—literally, red and green—by your comparisons to other institutions and to differences between subgroups within your institution. The **Results at a Glance** and **COACHE Dashboard** will show you, within 10 minutes or so, the broad themes of your survey results and the areas deserving of immediate scrutiny.

Take note of our criteria for determining “areas of strength” and “areas of concern.” COACHE analysts have identified comparative “strengths” as those survey dimensions where your campus ranks first or second among your six peers. A comparative “concern,” on the other hand, means your campus ranked fifth or sixth among your peers. Differences by gender, race, rank, and tenure status are highlighted when mean results differ by a moderate or large effect.

The digital files accompanying this report contain **faculty responses to open-ended questions**, including their opinions on the one thing your college can do to improve the workplace for faculty. Our members find this qualitative, personal component of the report helpful in illustrating the faculty story in ways that quantitative data cannot.

Your rich dataset tells many stories, and review of the **means comparisons and frequency distributions** will yield some important nuances that defy easy summary. Institutional researchers find these tables particularly useful in organizing data for special constituents' needs (e.g., for a committee on the status of women or the chief diversity officer), but these crosstabs can be useful to anyone looking for more detail.

For example, you can sort the **Excel version** of these data tables to identify quickly *the degree to which* your faculty are more or less satisfied than faculty at your six peers. You can also use the **Criteria tab** in your Excel report to raise or lower the threshold for areas of strength and weakness. If your report is overrun with highlighted differences between men's and women's levels of satisfaction, you can easily raise the threshold for highlighting, and the report will adjust itself accordingly. Changing the criteria for “top-level” results, then, allows you to reorganize your report around your biggest successes and most pressing problems.

Soon, you will discover that many faculty concerns can be dealt with immediately and inexpensively, while others present themselves as opportunities for broad involvement in designing collaborative solutions.

Build a communication plan.

If you have not yet developed a “COACHE communication plan,” do so now. Use the

COACHE Communication Models and Milestones charts in your supplementary materials to help you consider where your campus (or your leadership style) fits now on the range of transparency and shared governance, and perhaps where it should be in the future. Of course, this framework is not designed to suggest that one approach is always better than another, but instead, to assist in your determination of which approach is best given your institution's culture—and given also what your faculty want from you, their leaders, as expressed through the COACHE survey.

To inform your communication strategy, **review the campus calendar** for the most effective venues to discuss COACHE participation, such as faculty senate meetings, collective bargaining group meetings, opening convocations and/or retreats (for deans, chairs, and/or faculty), and new faculty orientations.* **Consider print and electronic media outlets** (e.g., campus newspapers, HR and provostial newsletters, faculty job postings) for communicating your COACHE enrollment and results. When you have decided on a course of action, **prepare and distribute a letter for communicating your plan.**

Disseminate broadly.

Whatever model you feel fits best, **do not delay sharing your institutional report, in part or in full, with key constituents on your campus.** Consider **forming a task force or ad hoc committee.** If you choose to do so, you should designate its members as the conduit for all information about COACHE and mention this group in all communication with faculty. Put your data into play with pre-tenure and tenured faculty, the faculty senate, collective bargaining groups, campus committees (e.g., Promotion & Tenure, Status of Women, Diversity), deans, department

chairs, the executive council and/or senior administrators, including the Chief Diversity Officer, and the board of trustees (see more on this below).

It is particularly important to disseminate your results to the faculty who each spent about 20 minutes completing the survey. Failure to demonstrate action in response to their contribution of time may result in reduced response rates in future surveys. Many COACHE members have posted some or all of their results on their web sites to highlight institutional strengths and demonstrate their commitment to transparency in improving the areas of concern.

Many colleges and universities **hold workshops and forums** with constituents, together or separately, to discuss interpretations of and policy responses to their COACHE findings. When meeting with these groups, ask questions to organize and catalyze the conversations around COACHE. For example: What confirmed (or defied) conventional wisdom? What are the surprises? Disparities? Lessons? Implications?

Take ownership.

You must **take ownership** of the results, or insist that people in a position to make change are held accountable for doing so. Our colleagues, Cathy Trower and Jim Honan, cited a provost in *The Questions of Tenure* (ed. R. Chait, 2002) who said: "Data don't just get up and walk around by themselves... they only become potent when somebody in charge wants something to happen." Without the catalyst of responsibility, good intentions may not produce desired results.

Consider forming, for example, a **mid-career faculty task force** that would identify the COACHE findings particularly germane to local concerns of associate professors, then would present a range of policy recommendations emerging from their analysis. As an alternative, ask administrators in academic affairs, faculty development, diversity, and

* Although COACHE does not survey new hires, these faculty are likely to communicate with their colleagues. Additionally, even though they did not participate in the survey, they will benefit from your responses to the findings.

human resources to read the report and **identify the top three things they would recommend** as a result. The responses might be broad (e.g., “Demystify the promotion process”) or specific (e.g., “Increase availability of eldercare options”). Naturally, expectations ought to be set so that recommendations are realistic and align with your strategic plan and priorities.

Through COACHE, we have seen this accountability exemplified by a provost who memorably signaled a “buck stops here” attitude (not to mention a sense of humor) to improving faculty work/life by donning a shirt imprinted with “C-A-O” in big, bold letters. He understood that the actions suggested by his COACHE report—whether highlighting strengths or addressing concerns—align with the will of policymakers *and* faculty, and that **it must be someone’s responsibility to see the recommendations through to outcomes**. Just giving constituents—and in particular, the faculty—some part in the COACHE conversation gives them a stake in advancing better recruiting, retention, and development.

Engage with peer institutions.

We named this project the *Collaborative* because only by **gathering together the agents for change** in faculty work/life will we understand what works well, where, and why. Several times each year, COACHE sends invitations to key contacts at each member institution to participate in conference-based special events and workshops. There, participants share innovative strategies for using COACHE data and tackling the challenges we all have in common.

Out of these discussions have emerged more comprehensive **data-sharing agreements among peers, site visits to exemplary institutions, and lasting contacts for free advice and consultation**. (“We’re thinking about implementing this new program. Has anyone else ever tried it?”)

In addition to bringing COACHE members together for these special events, we continually seek out other ways to support our collaborative spirit: hosting our annual Leaders’ Workshop; highlighting member institutions in our newsletter; trying out new policy and program ideas on the COACHE ListServ (sign up at www.coache.org); and offering to conduct site visits to member campuses. Thanks to these collaborations, we all gain actionable insight into making colleges campuses great places to work.

Call us.

Think of COACHE as your hotline for suggestions in faculty recruitment, development and success. For the duration of your three-year COACHE membership, please call us (617-495-5285) if you have any questions about how you can make the most of your investment in this project. Also, recommend to anyone working with or presenting COACHE data (such as institutional research staff) to call us for advice and tools to simplify the work.

If your COACHE report is collecting dust on the shelf, then we have failed. Let us help you cultivate your data—and your faculty—as a renewable resource.

WHAT’S A DEAN TO DO?

by Cathy Trower, COACHE Co-founder

Not long ago, after addressing a group of academic deans about the barriers to interdisciplinary scholarship and changes needed to overcome them, a dean asked, “But what’s a dean to do? We are seen as ‘middle meddlers!’” He elaborated by saying that it is difficult to manage or effect change from the decanal vantage point because of the organizational hierarchy and power structure; there’s a provost and president above him and senior, department chairs and tenured faculty in various departments around him.

Since that question was posed to me, I have met with several academic administrators and here is what I've learned about what deans can do to bring about improvements on any issue, whether it is promoting interdisciplinary scholarship and supporting such scholars for success, increasing the numbers, status, and success of women in STEM disciplines and of faculty of color, or creating a great place to work for faculty. I hope these suggestions will prove helpful for COACHE member institutions as they focus on the issues related to faculty recruitment, retention and development on their campuses as uncovered by our survey.

Focus attention.

Most issues have low salience for most people most of the time. In addition, there are always multiple concerns on college campuses and all too often the 'crisis de jour' can distract us from persistent, systemic problems. Deans can help focus the attention of faculty and other administrators by spending time, over time, on the issue upon which s/he wishes to influence.

Be accountable.

Gather data. Deans are in a prime position to call attention to issues or problems by bringing data to bear on them. Research shows that what gets measured gets done. In some cases, the data are quantitative and in others help will come in the form of stories and anecdotes. In any case, marshal the evidence to make the case.

Engage colleagues up, down, and across campus.

Build alliances with other deans by discussing areas of mutual concern, defining the problems, and thinking of possible solutions. Involve the faculty in those conversations. One administrator with whom I spoke recently said that he plans to form an Advisory Task Force of key senior faculty to figure out how to make progress recruiting and retaining scholars of color. Take the ideas to the provost; in other words, make your best case and make it

known that you have support on multiple fronts. Offer solutions, not more problems.

Don't accept the status quo.

In other words, persist. Some decisions in academic institutions are made by accretion and just because one's proposal is rejected today doesn't mean that it won't be accepted later. Deans can persist until progress, even incremental, is made. An effective strategy is not only to anticipate the costs of policy implementation (e.g., modified duties, flextime, stop-the-clock, dual career hires), but also to discuss the cost of maintaining the status quo.

Ask questions.

Instead of feeling the need to have all the answers all of the time, pose questions in a variety of forums where you already have people's attention. As one dean said to me, "I lead by asking relevant questions at a variety of tables with various constituencies. Most often, those questions have no easy answers, but I am able to put the issue effectively into play. Raising issues as questions puts academics in a mindset of problem solving. This is, after all, how we all approach our own scholarship – with questions, not with answers."

COACHE & GOVERNANCE

by Richard Chait, COACHE Co-founder

Academic administrators regularly and rightly remind boards of trustees that the quality of a college or university and the vitality of the faculty are very tightly linked. In turn, most trustees recognize that the vitality of the faculty requires that institutions create an attractive and supportive work environment. In particular, colleges must be able to recruit and retain a talented and diverse stream of "new blood" for the faculty. Despite the importance administrators and trustees assign to this objective, boards rarely discuss the topic.

COACHE reports offer presidents, provosts, and deans the opportunity to engage trustees at an appropriate policy level in conversations about the quality of work life for the faculty that represent the institution's academic future and its current reality. There are two potentially productive lines of inquiry. In the first mode, management educates the board about major themes that emerged from COACHE data and from benchmark comparisons with the institution's peer group.

The Provost's Report can be further distilled to highlight for trustees the overall or global levels of satisfaction; specific aspects of work/life that faculty consider most agreeable and most problematic; significant disparities by race, gender, or rank; and critical "policy gaps," areas respondents rated important in principle and unsatisfactory in practice. In short order, trustees will have keener insight into the organizational environment and personal experiences of faculty, as well as a deeper appreciation for management's commitment and game plan to make the college a great place to work.

The second mode, which may be even more profitable, turns the tables. Here, trustees educate the administration. As academic leaders contemplate appropriate responses to the challenges and concerns that faculty confront, board members can be a valuable resource. Whether as corporate executives or senior partners in firms (e.g., law, medicine, consulting, and engineering), many trustees also have to create, if only for competitive reasons, attractive work environments responsive to the preferences and lifestyles of new generations of professionals. While the circumstances are not identical, the fundamental challenges are not terribly different: clarity of performance expectations; professional fulfillment; work-family balance; collegial culture; and diversity, to name a few.

With COACHE data as context, trustees can share successful (and unsuccessful) strategies, policies, and practices intended to improve work satisfaction and vitality, whether for relatively young newcomers or

seasoned veterans at the company or firm. What did you try, and to what effect? What did you learn? This line of inquiry could well yield some innovative and effective initiatives that can be adapted to academe, and the discussion will reinforce the board's role as a source of intellectual capital and as active participants in consequential conversations.

BACKGROUND & DEFINITIONS

Background

The principal purposes of the Collaborative on Academic Careers in Higher Education (COACHE) survey are two-fold: (1) to enlighten academic leaders about the experiences and concerns of full-time, faculty; and (2) to provide data that lead to informed discussions and appropriate actions to improve the quality of work/life for those faculty. Over time, we hope these steps will make the academy an even more attractive and equitable place for talented scholars and teachers to work.

The core element of COACHE is a web-based survey designed on the basis of extensive literature reviews; of themes emerging from multiple focus groups; of feedback from senior administrators in academic affairs; and of extensive pilot studies and cognitive tests in multiple institutional contexts. While there are many faculty surveys, the COACHE instrument is unique in that it was designed expressly to take account of the concerns and experiences of faculty on issues with direct policy implications for academic leaders.

This *COACHE Faculty Job Satisfaction Survey* provides academic leaders with a lever to enhance the quality of work-life for faculty. The report portfolio provides not only interesting data, but also actionable diagnoses—a springboard to workplace improvements, more responsive policies and practices, and an earned reputation as a great place for faculty to work.

Survey Design

The chief aim in developing the *COACHE Faculty Job Satisfaction Survey* was to assess, in a comprehensive and quantitative way, faculty's work-related quality of life. The survey addresses multiple facets of job satisfaction and includes specific questions that would yield unambiguous, actionable data on key policy-relevant issues.

The COACHE instrument was developed and validated in stages over a period of several years. Focus groups were conducted with faculty to learn how they view certain work-related issues, including specific institutional policies and practices, work climate, the ability to balance professional and personal lives, issues surrounding tenure, and overall job satisfaction.

Drawing from the focus groups, prior surveys on job satisfaction among academics and other professionals, and consultation with subject matter and advisory board experts on survey development, COACHE researchers developed web-based survey prototypes that were then tested in pilot studies across multiple institutions.

COACHE solicited feedback about the survey by conducting follow-up interviews with a sub-sample of the respondents of the pilot study. Cognitive interviews were conducted with faculty from a broad range of institutional types to test the generalizability of questions across various institutional types. The survey was revised in light of this feedback. The current version of the survey was revised further, taking into account feedback provided by respondents in survey administrations annually since 2005.

Survey administration

All eligible subjects at participating institutions were invited to complete the survey. Eligibility was determined according to the following criteria:

- Full-time
- Not hired in the same year as survey administration
- Not clinical faculty in such areas as Medicine, Dentistry, Nursing, Pharmacy, and Veterinary Medicine
- Not in terminal year after being denied tenure

Subjects first received a letter about the survey from a senior administrator (e.g., president, provost, or dean) at their institution. Next, subjects received an email from COACHE inviting them to complete the survey. Over the course of the survey administration period, three automated reminders were sent via email to all subjects who had not completed the survey.

Participants accessed a secure web server through their own unique link provided by COACHE and, agreeing to an informed consent statement, responded to a series of multiple-choice and open-ended questions (see *Supplemental Materials*). Generally, respondents completed the survey in less than twenty-five minutes; the mode (most frequent) completion time was approximately 21 minutes.

Data conditioning

For a participant's responses to be included in the data set, s/he had to provide at least one meaningful response beyond the initial demographic section of the instrument. The responses of faculty who either terminated the survey before completing the demographic section or chose only *N/A* or *Decline to Respond* for all questions were removed from the data set. The impact of such deletions, however, is

relatively small: on average, greater than 90 percent of respondents who enter the COACHE survey go on to complete it in its entirety.

When respondents completed the survey in an inordinately short time or when the same response was used for at least 95% of items, the respondents were removed from the population file.

For demographic characteristics which impact a respondent's path through the survey (tenure status and rank) or the COACHE Report (gender and race) institutionally provided data is confirmed by the survey respondent in the demographics section of the survey. When respondent answers differ from institutional data, COACHE always recodes the data to match the respondent's selection.

In responses to open-ended questions, individually-identifying words or phrases that would compromise the respondent's anonymity were either excised or emended by COACHE analysts. Where this occurred, the analyst substituted that portion of the original response with brackets containing an ellipsis or alternate word or phrase (e.g., [...] or [under-represented minority]). In the case of custom open-ended questions, comments were not altered in any way.

Definitions

All comparable institutions, "All comparables," or "All"

Within the report, comparisons between your institution and the cohort group provide context for your results in the broader faculty labor market. While the experiences, demands, and expectations for faculty vary by institutional type—reflected in your peers selections—this comparison to the entire COACHE cohort can add an important dimension to your understanding of your faculty. The institutions included in this year's "all comparables" group are listed in the appendix of your Provost's Report.

Data weighting or "weight scale"

In prior reports, a weighting scale was developed for each institution to adjust for the under- or over-representation in the data set of subgroups defined by race and gender (e.g., White males, Asian females, etc.). Applying these weights to the data thus allowed the relative proportions of subgroups in the data set for each institution to more accurately reflect the proportions in that institution's actual population of pre-tenure faculty.

However, the use of weights poses some methodological challenges. First, and foremost, the

actual application of weights in the COACHE report only produced very small changes in results. Because COACHE does not use samples the respondent group typically is representative of the full population. Also, weights applied to an overall mean are less useful when comparing subgroups of the respondent population. When weighted data is disaggregated, the utility of the weights is compromised. For these reasons and other, the use of weights for this type of large scale analysis is becoming less common.

Effect size

Put simply, an effect size describes the magnitude of difference between two groups, regardless of statistical significance. In this report, effect sizes measure the differences between paired subgroups within a campus (i.e., men and women, tenured and pre-tenure faculty, associate and full professors, white faculty and faculty of color).

We do not use tests of statistical significance in part because COACHE is a census, not a sample; differences in means are representative of the population, not of some broader sample. We rely on effect sizes, instead, because they consider both the central tendency and the variance, countering concerns about differences in group sizes. Also, unlike other measures of differences between groups, effect sizes show both the direction and magnitude of differences.

Effect sizes in this report are calculated using the formula below where:

$$\frac{X_1 - X_2}{\sqrt{(sd_1^2 + (sd_2^2)/2)}}$$

In the social science research domain in which COACHE operates, the following thresholds are generally accepted ranges of effect size magnitude.

- 0 < Trivial < .1
- .1 < Small < .3
- .3 < Moderate < .5
- .5 < Large < 1.0+

This report ignores trivial differences, but subgroups appear in the Within Campus Differences tables when their ratings are lower than their comparison group by a small (unshaded), moderate (yellow), or large (orange) effect.

Faculty of color or “foc”

Any respondent identified by his or her institution or self-identifying in the survey as non-White.

n < 5

To protect the identity of respondents and in accordance with procedures approved by Harvard University’s Committee on the Use of Human Subjects, cells with fewer than five data points (i.e., mean scores for questions that were answered by fewer than five faculty from a subgroup within an institution) are not reported. Instead, “n < 5” will appear as the result.

Response rate

The percent of all eligible respondents, by tenure status, rank, gender and by race, whose responses, following the data conditioning process, were deemed eligible to be included in this analysis. Thus, your response rate counts as nonrespondents those faculty who were “screened out” by the survey application or by later processes.

Please feel free to contact COACHE with any additional questions about our research design, methodology, or definitions; about survey administration; or about any aspects of our reports and available data.

PARTICIPATING INSTITUTIONS

Faculty from the following institutions comprise the COACHE database of Universities for this 2015 Provost's Report.

Auburn University
Central Washington University
Clemson University
Duke University
Florida State University
Gonzaga University
Indiana University – Bloomington
James Madison University
Kansas State University
Lehigh University
Loyola University Maryland
Montclair State University
New School University
Northern Arizona University
Otterbein University
Radford University
Syracuse University
University of Alabama
University of Arkansas
University of California, Davis
University of Connecticut
University of Kansas
University of Minnesota – Twin Cities
University of Missouri – Kansas City
University of Saint Thomas (MN)
University of the Pacific
University of Tulsa
University of Washington Tacoma
University of Wisconsin – Platteville
Virginia Commonwealth University
West Virginia University

Bowling Green State University
Christopher Newport University
Dartmouth College
Florida International University
Georgetown University
Indiana State University
Iowa State University
Johns Hopkins University
Kent State University
Lincoln University (MO)
Merrimack College
New Jersey City University
North Dakota State University
Old Dominion University
Purdue University
Rochester Institute of Technology
Tulane University
University of Arizona
University of Baltimore
University of Central Florida
University of Houston
University of Massachusetts - Lowell
University of Missouri – Columbia
University of Rochester
University of Tennessee
University of Toronto
University of Virginia
University of Wisconsin – Parkside
Virginia Polytechnic Institute and State University
Washington State University
Worcester Polytechnic Institute

The State University of New York System
Alfred State College
Buffalo State College
Maritime College
Purchase College
SUNY at Brockport
SUNY at Cobleskill
SUNY at Delhi
SUNY at Geneseo
SUNY at Old Westbury
SUNY at Oswego
University at Albany □ University at Buffalo
SUNY at Potsdam

Binghamton University
Farmingdale State College
Morrisville State College
Stony Brook University
SUNY at Canton
SUNY at Cortland
SUNY at Fredonia
SUNY at New Paltz
SUNY at Oneonta
SUNY at Plattsburgh
SUNY Institute of Technology at Utica/Rome
SUNY College of Environ. Science & Forestry

The University of North Carolina System
Appalachian State University
Fayetteville State University
North Carolina Central University
University of North Carolina - Asheville
University of North Carolina at Chapel Hill
University of North Carolina – Pembroke
Western Carolina University

East Carolina University
North Carolina Ag & Tech State University
North Carolina State University
University of North Carolina - Charlotte
University of North Carolina - Greensboro
University of North Carolina - Wilmington
Winston-Salem State University

The City University of New York System
Bernard M. Baruch College
City College of New York City
Hunter College
Lehman College
New York City College of Technology
York College

Brooklyn College
College of Staten Island
John Jay College Criminal Justice
Medgar Evers College
Queens College

Faculty from the following institutions comprise the COACHE database of Liberal Arts Colleges and Small Masters Universities for this 2015 Provost's Report.

Albright College
College of the Holy Cross
Elizabeth City State University
Franklin and Marshall College
Hendrix College
Kenyon College
Mount Holyoke College
Providence College
Richard Stockton College of New Jersey
Scripps College
St. Olaf College
The University of the South
Wabash College
Wheaton College (MA)

Amherst College
Connecticut College
Emerson College
Hamilton College
Hobart William Smith Colleges
Middlebury College
Pitzer College
Pomona College
Saint Mary's College of Maryland
Skidmore College
Stonehill College
University of Richmond
Wellesley College

The following table lists the previous members of the Collaborative. Pre-tenure faculty at these institutions have completed a prior version of COACHE's survey instrument; their data are not included in this report's analysis, but are available for custom reporting.

Arizona State University
Ball State University
Barnard College
Bates College
Boston University
Bowdoin College
Brown University
Carleton College
Case Western Reserve University
Colgate University
College of Saint Benedict / Saint John's University
The College of Wooster

Davidson College
Delaware State University
Denison University
DePauw University
Drexel University
Goucher College
Hampshire College
Harvard University
Hofstra University
Ithaca College
Lafayette College
Loyola Marymount University

Macalester College
Manhattanville College
McGill University
Michigan State University
Mississippi State University
Montana State University
Northeastern University
Oberlin College
Occidental College
The Ohio State University
Ohio University
Ohio Wesleyan University
